Digital Inverter Compressor

The Digital Inverter Compressor automatically adjusts its speed in response to cooling demand across 7 levels. So it uses less energy, minimizes noise and reduces wear and tear for a longer-lasting performance. And for complete peace of mind its performance is backed up by a 10 year warranty*.

* 10 year warranty is limited to the compressor only.

No Frost

No Frost technology enhances the circulation of air to maintain a constant temperature in every corner of the fridge, which prevents the build up of frost and ice. It also reaches the target temperature much faster, increases the cooling system's durability, and avoids wasting power on defrosting.

All-around Cooling

The All-around Cooling system continually monitors any temperature fluctuation and cools the fridge evenly from corner to corner. Cold air is blown out through multiple vents on every shelf level to create a multi-directional airflow, so it maintains a constant temperature and food stays fresher.

LED Lighting

LED lights brilliantly illuminate the refrigerator interior without compromising cooling power
